

## Practice guideline recommendations summary: Disease-modifying therapies for adults with multiple sclerosis: Report of the Guideline Development, Dissemination, and Implementation Subcommittee of the American Academy of Neurology

*Neurology*® 2019;92:112. doi:10.1212/WNL.0000000000006722

In the Special Article “Practice guideline recommendations summary: Disease-modifying therapies for adults with multiple sclerosis: Report of the Guideline Development, Dissemination, and Implementation Subcommittee of the American Academy of Neurology” by A. Rae-Grant et al.,<sup>1</sup> there are errors on page 780 of the full article. The Starting: Recommendation 12 Rationale should state “With teriflunomide treatment, there may be a risk of teratogenicity from male *seminal fluid*, which could last for 2 years after treatment cessation if the patient is not treated with *adsorption* therapy” rather than “With teriflunomide treatment, there may be a risk of teratogenicity from male sperm, which could last for 2 years after treatment cessation if the patient is not treated with chelation therapy” as originally published. The authors regret the errors.
